EXAMINER

SOL, ANTHONY M

ART UNIT PAPER NUMBER

2616

DATE MAILED: 07/13/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

sf

Office Action Summary	Application No.		Applicant(s)	
	09/936,488		BITZINGER ET AL.	
	Examiner		Art Unit	
	Anthony Sol		2616	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 17-32 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 17-32 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 01 May 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

- Applicant's Amendment filed 05/01/2006 is acknowledged.
- Claims 1-16 have been previously canceled.
- Claims 17-32 have been previously added.
- The previous objection to the drawings is withdrawn.
- Claims 17 and 26 have been amended.
- Claims 17-32 remain pending.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 17-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 17,

The applicant discloses, "allocating, via the controller, the Quality of Service for the requested use of the service as a function of at least one of the service and the requested use of the service." It is not clear what is meant by function of the requested use of the service.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 17-32 are rejected as best understood under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,680,922 B1 (“Jorgensen”).

Regarding claim 17,

Jorgensen shows in Fig. 15A a downlink IP flow analyzer (controller) which includes packet header identification component 1502, packet characterization component 1504, packet classification component 1506, and IP flow presentation component 1508 (Col. 61, lines 28-31). Jorgensen discloses a packet characterization component 1504 that characterizes a new data packet to determine the QoS requirements (requesting use of the service is inherent in order to determine the QoS requirements) for the IP data flow, and identifies the subscriber CPE station associated with the subscriber workstation that will receive the IP data flow (Col. 61, lines 56-59; claim 17 – requesting, by a controller, use of the service).

Jorgensen further discloses that packet classification component 1506 classifies the new IP data flow into a communications priority class and downlink flow scheduler 604 places the data packets of an IP data flow into a class queue (Col. 61, lines 61-67;

claim 17 - requesting, by a controller, use of the service; and allocating, via the controller, the Quality of Service for the requested use of the service as a function of at least one of the service and the requested use of the service).

5. Regarding claim 18,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that differentiation can be done on the basis of some identifiable information contained in packet headers. Jorgensen further discloses that one method can include analyzing an IP packet header, which can serve to uniquely identify and associate the packet and other packets from that packet flow with a particular application, function, or purpose (use of the service) (Col. 18, lines 13-19; claim 18 - the use of the service is requested without stating the Quality of Service).

6. Regarding claim 19,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that a gateway also translates between audio and video codecs and performs call setup and clearing on both the LAN side and the switched-circuit network side (Col. 38, lines 37- col. 39, lines 1-3; claim 19 - the service is the transmission of voice information).

7. Regarding claims 20 and 21,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that a source IP address, a source TCP or UDP port, a destination IP address, and a destination IP or UDP port can serve to associate (checking) packets into a common flow (at least one packet stream), i.e. can be used to classify the packets into a class of service. Jorgensen further discloses that by creating a finite and manageable number of discrete classes of service, multiple IP flows can be consolidated and handled (whether the requested use of the service can be provided) with a given set of QoS parameters by the QoS mechanisms (the intended Quality of Service by the communications network) (Col. 18, lines 18-26; claim 20 - checking, via the controller, whether the requested use of the service can be provided with the intended Quality of Service by the communications network; claim 21 - when the service is used by the communications network, at least one packet stream which is allocated to the service is transmitted with the Quality of Service).

8. Regarding claim 22,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen shows in Fig. 2D a router 140d (network gateway device) receiving QoS signals (described in the rejection to claim 21) from wireless base station 302

(Claim 22 - signaling, via the controller, the Quality of Service of the packet stream to at least one network gateway device).

Jorgensen discloses that the downlink flow scheduler 604 of Fig. 15A places the data packets (packet stream) of an IP data flow, after being classified into a priority class based on QoS requirements, into a class queue for transmission to a subscriber CPE station 294d (Col. 61, lines 56-67 – col. 62, lines 1-2) of Fig. 2D using the communications network 296 (Claim 22 - transmitting, via the network gateway device, the packet stream with the signaled Quality of Service to the communications network)..

9. Regarding claim 23,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen shows in Fig. 2C a telephone gateway 288b and router 140b (edge device) (Claim 23 - the network gateway device is an edge device).

10. Regarding claims 24 and 25,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that IP packets (signaling packets) of the IP flow are identified by analyzing the header information to determine QoS requirements of the IP flow, so that the IP flow can be characterized, classified, presented (acknowledgement), prioritized and scheduled (Col. 42, lines 1-5; claim 24 - requiring at least one

acknowledgement of the signaled Quality of Service for the allocation of the Quality of Service; claim 25 - Quality of Service is signaled using signaling packets).

11. Regarding claim 26,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that data traffic can be handled based on classes of service. Jorgensen further discloses that to differentiate traffic by class, data traffic can be classified into one of several classes of service (Col. 18, lines 9-13; claim 26 - providing at least one high Quality of Service and at least one low Quality of Service in the communications network).

12. Regarding claims 27-31,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses a real-time transport protocol (RTP) that adds a time stamp and a header (Quality of Service tag) that distinguishes whether an IP packet (Internet packets) is data or voice, allowing prioritization of voice packets (Col. 43, lines 58-60; claim 27 - packet streams with the high Quality of Service are transmitted with priority by the network gateway device; claim 28 - providing a Quality of Service tag in the packets; claim 29 - the network gateway device transmits packet streams which are to be transmitted with a high Quality of Service with a first Quality of Service tag which

represents the high Quality of Service, and transmits remaining packet streams with a second Quality of Service tag which represents the low Quality of Service; claim 30 – producing the Quality of Service on the basis of priorities, the high Quality of Service being high priority and the low Quality of Service being low priority, and the Quality of Service tag being a priority tag; claim 31 - the packets are Internet packets).

13. Regarding claim 32,

Jorgensen discloses a method that covers all the limitations of the parent claim.

Jorgensen discloses that the H.323 gatekeeper acts as a virtual switch (Col. 38, lines 34-35; claim 32 - the controller is a gate keeper in accordance with International Standard H.323).

Response to Arguments

14. Applicant's arguments filed 5/1/2006 have been fully considered but they are not persuasive.

- In the Remarks beginning on pg. 6 of the Amendment, the Applicant contends that the claim form is proper in response to the 35 U.S.C. § 112, second paragraph rejection of claim 17. Specifically, the Applicant, as an example, defines "requested use of the service" to pertain to the controller,

allocating a quality of service of 18 kbps with respect to a full network and allocating the quality of service of 64 kbps with respect to an empty network, thus a different quality of service is awarded dependent on the *time* of the requested use. The Applicant further offers that the “requested use of service” could pertain to a high quality of service that could be awarded to users having a premium tariff and a low bandwidth to users with a low budget tariff under the example.

- The Examiner respectfully disagrees that the form is proper. The Examiner maintains that the phrase, “allocating, via the controller, the Quality of Service for the requested use of the service as a function of at least one of the service and the ***requested use of the service***,” fails to point out and distinctly claim the subject matter. It is noted that the features upon which Applicant relies (e.g. time of the requested use, whether the user has a premium or low tariff or anything that distinctly claim the subject matter of “***requested use of the service***”) are not recited in the rejected claim 17. Therefore, it is unclear what is being claimed. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). In addition, the term “allocating, via the controller, the Quality of Service for the requested use of the service as a function of at least one of the service and the requested use of the service” could be read alternatively as --

allocating, via the controller, the Quality of Service for the requested use of the service as a function of the requested use of the service --. Then, what is meant by, "the Quality of Service for the requested use of the service as a function of the requested use of the service"? Thus, the Examiner maintains that the 35 U.S.C. § 112, second paragraph rejection of claim 17 is proper.

- Regarding the 35 U.S.C. § 102(e) rejection of claim 17, the Applicant contends that the Jorgensen reference fails to teach or suggest the features of "allocating, via the controller, the Quality of Service for the requested use of the service as a function of at least one of the service and the requested use of the service."
- The Examiner respectfully disagrees. In light of the discussion above concerning the 35 U.S.C. § 112, second paragraph rejection, the Examiner interprets the phrase, "requested use of the service" broadly. Thus, the 102(e) rejection to claim 17 above is proper. Specifically, the Examiner maintains that Jorgensen's disclosure that the packet classification component 1506 classifies the new IP data flow into a communications priority class and downlink flow scheduler 604 places the data packets of an IP data flow into a class queue (Col. 61, lines 61-67) meets the limitation of "requested use of the service."

- Regarding the 35 U.S.C. § 102(e) rejection of claim 18, the Applicant contends Jorgensen neither teaches or suggests, "the use of the service is requested without stating the Quality of Service."
- The Examiner respectfully disagrees. As discussed above in the rejection to claim 18, Jorgensen discloses analyzing an IP packet header, which can serve to uniquely identify and associate the packet and other packets from that packet flow with a particular application, function, or purpose (claimed *use of the service*) (Col. 18, lines 13-18). Jorgenson further discloses that a source IP address, a source TCP or UDP port, a destination IP address, and a destination IP or UDP port can serve to associate packets into a common flow, i.e. can be used to classify the packets into a class of service (claimed *without stating the Quality of Service*)(col. 18, lines 18-22).

Conclusion

15. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

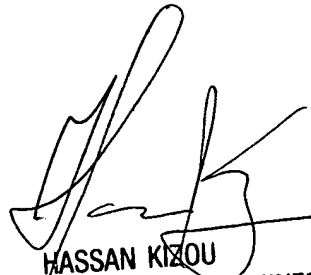

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Sol whose telephone number is (571) 272-5949. The examiner can normally be reached on M-F 7:30am - 4pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hassan Kizou can be reached on (571) 272-3088. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
